Experience

2023 - 2025
Western Caroline Trading Company I T-Dock, Meketii, Koror, Palau

Software Developer

Responsibilities:

1. Analyze business requirement, identify operational gaps and recommend appropriate system for development to the management.
2. Maintain and update accounting software, ensuring systems run efficiently and remain up to date with the latest features and regulatory changes.
3. Diagnose and resolve software bugs, collaborating closely with accounting and operations teams to identify issues and implement effective solutions.
4. Modify existing code to improve performance, add functionality, and ensure system security and compliance with industry standards.
5. Develop middleware to automate and simplify repetitive tasks, reducing manual workloads for accounting staff and improving operational efficiency.
6. Provide daily technical support for internal users, troubleshooting software issues and assisting with system configuration and user training.
7. Collaborate with cross-functional teams to integrate new features and ensure smooth data flow between accounting software and other business systems.
8. Document system changes and create technical manuals for future reference and training.

2008 - 2023
Duty Free Philippines I 2/F EHA Bldg., Paranaque, Metro Manila

Sr. Applications Developer

As an application developer I am tasked to:

1. Determine system specifications, input/ output processes and working parameters to meet business requirements and hardware/ software compatibility.
2. Convert business and system requirements into detailed system design and technical specifications.
3. Design, develop and implement software applications using Visual Basic 6.0/ VB.Net, RPG/ILE, MorphX and advanced technologies to produce configurable, reusable, scaleable and secure software solutions.
4. Recommend software, hardware, tools and techniques that address organizational goals and objectives.
5. Work with business process analysts on detailed data and process designs and review requirement definitions to ensure consistency.
6. Create work effort estimates that will be used to present to the Applications Development Section Head and will be the primary input to project schedule work breakdowns.
7. Resolve conflicts and gaps between requirements, specifications, application system performance and system configurations.
8. Review programs, modules and subroutines and make sure that the quality of coding meets standards and the whole product meets requirements.
9. Work with Computer Audit Staff on testing and quality assurance.
10. Analyze and troubleshoot existing program code and correct errors as required per Audit findings.
11. Create and maintain technical documentation of created programs that describes program code, logic, changes and corrections. Provide technical support to end users and other support groups.
12. Provide performance monitoring for applications assigned after implementation.

Skills

- Information System Strategic Planning, Computer hardware troubleshooting, computer networking TCP/ IP
- Program development using Visual Basic 6, VB.Net, Laravel, MSSQL/ MySQL/ PostgreSQL, AS/400 RPGIII / ILE / CL, CSS, Javasript, Boostrap, HTML, Microsoft Sharepoint, MorphX, PHP, Python, Machine Learning, Amazon Web Services

Financial Software/ Retail/ ERP

- Sage300
- eBackOffice by epicor
- Platinum for Windows
- FRx Financial Reporting
- JDA Software - Merchandising Management System
- Microsoft Dynamics AX 2012 R2
- Power BI

Experience

2005 - 2007

Steniel Cavite Packaging Corporation I General Trias Cavite

Systems Programmer

As systems programmer I am:

1. Develop, maintain and modify in-house application based on business requirements.
2. Responsible in preparing system software installation by studying software capabilities and operations, including task scheduling, memory management, file system and input and output requirements.
3. Detect work stoppage or errors by conducting test; monitoring output.
4. Optimizes system efficiency by analyzing performance indicators; changing software.
5. Maintains historical records by documenting system software changes and revisions.
6. Prepares reference for users by writing operating instructions.
7. Visit other locations (CEBU & DAVAO) for system maintenance, user training and support in operation.
